Restriction is required under 35 U.S.C. 121 and 372.

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-5 and 8-11, drawn to a compressor control responsive to torque converter operation, classified in Class 62, subclass 230.

II. Claims 6-7 and 13, drawn to a compressor control responsive to brake operation, classified in Class 62, subclass 133.

III. Claim 12, drawn to a compressor control responsive to clutch operation, classified in Class 62, subclass 323.4.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the invention in Group I as recited in claim 1 has separate utility such as in a system that does not have the means responsive to brake activation of Group II nor the means responsive to clutch engagement of Group III, the invention in Group II as recited in claim 6 has separate utility such as in a system that does not have the means responsive to torque operation of Group I nor the means responsive to clutch engagement of Group III, and the invention in Group III as recited in claim 12 has separate utility such as in a system that does not have the means responsive to torque operation of Group I nor the means responsive to brake activation of Group II. See M.P.E.P. § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search for each group is not required for the other groups restriction for examination purposes as indicated is proper.

Art Unit: 3744

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed.
